The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 49-51, 55-59 and 61-63 are rejected under 35 U.S.C. 102(b) as being anticipated by “Ethanol Extraction of Rubber Components”.

“Ethanol Extraction of Rubber Components” teaches extraction of gaskets by ethanol at temperatures of 50 to 70 C. The ethanol is taught as at reflux ("begins to distill") and treatment is taught as continuing for 72 hours. The gaskets are for use in metered dose inhalers and include those made of nitrile rubber. While the reference does not explicitly recite the residual amounts of the species claimed instantly, It is the position of the examiner that these amounts would be inherent to the gaskets of the reference since the process parameters are met. Also, the species extracted are seen as inherent to the process of the reference since the same rubber type is processed.

Therefore the reference anticipates the rejected claims.

Claims 52-54, 60 and 65 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
